

**Figures 1:** RGB images of spring, summer, and fall, respectively.

**Figures 2:** Final classification maps of spring, summer, and fall images and pixel percentages of each map.

Land Cover Map of Annapolis, MD using  
ISOData Classification - March 4, 2019

Land Cover Map of Annapolis, MD using  
ISOData Classification - July 26, 2019

Land Cover Map of Annapolis, MD using  
ISOData Classification - Sept 28, 2019

Pixel Percentages of Each Class, March 4, 2019

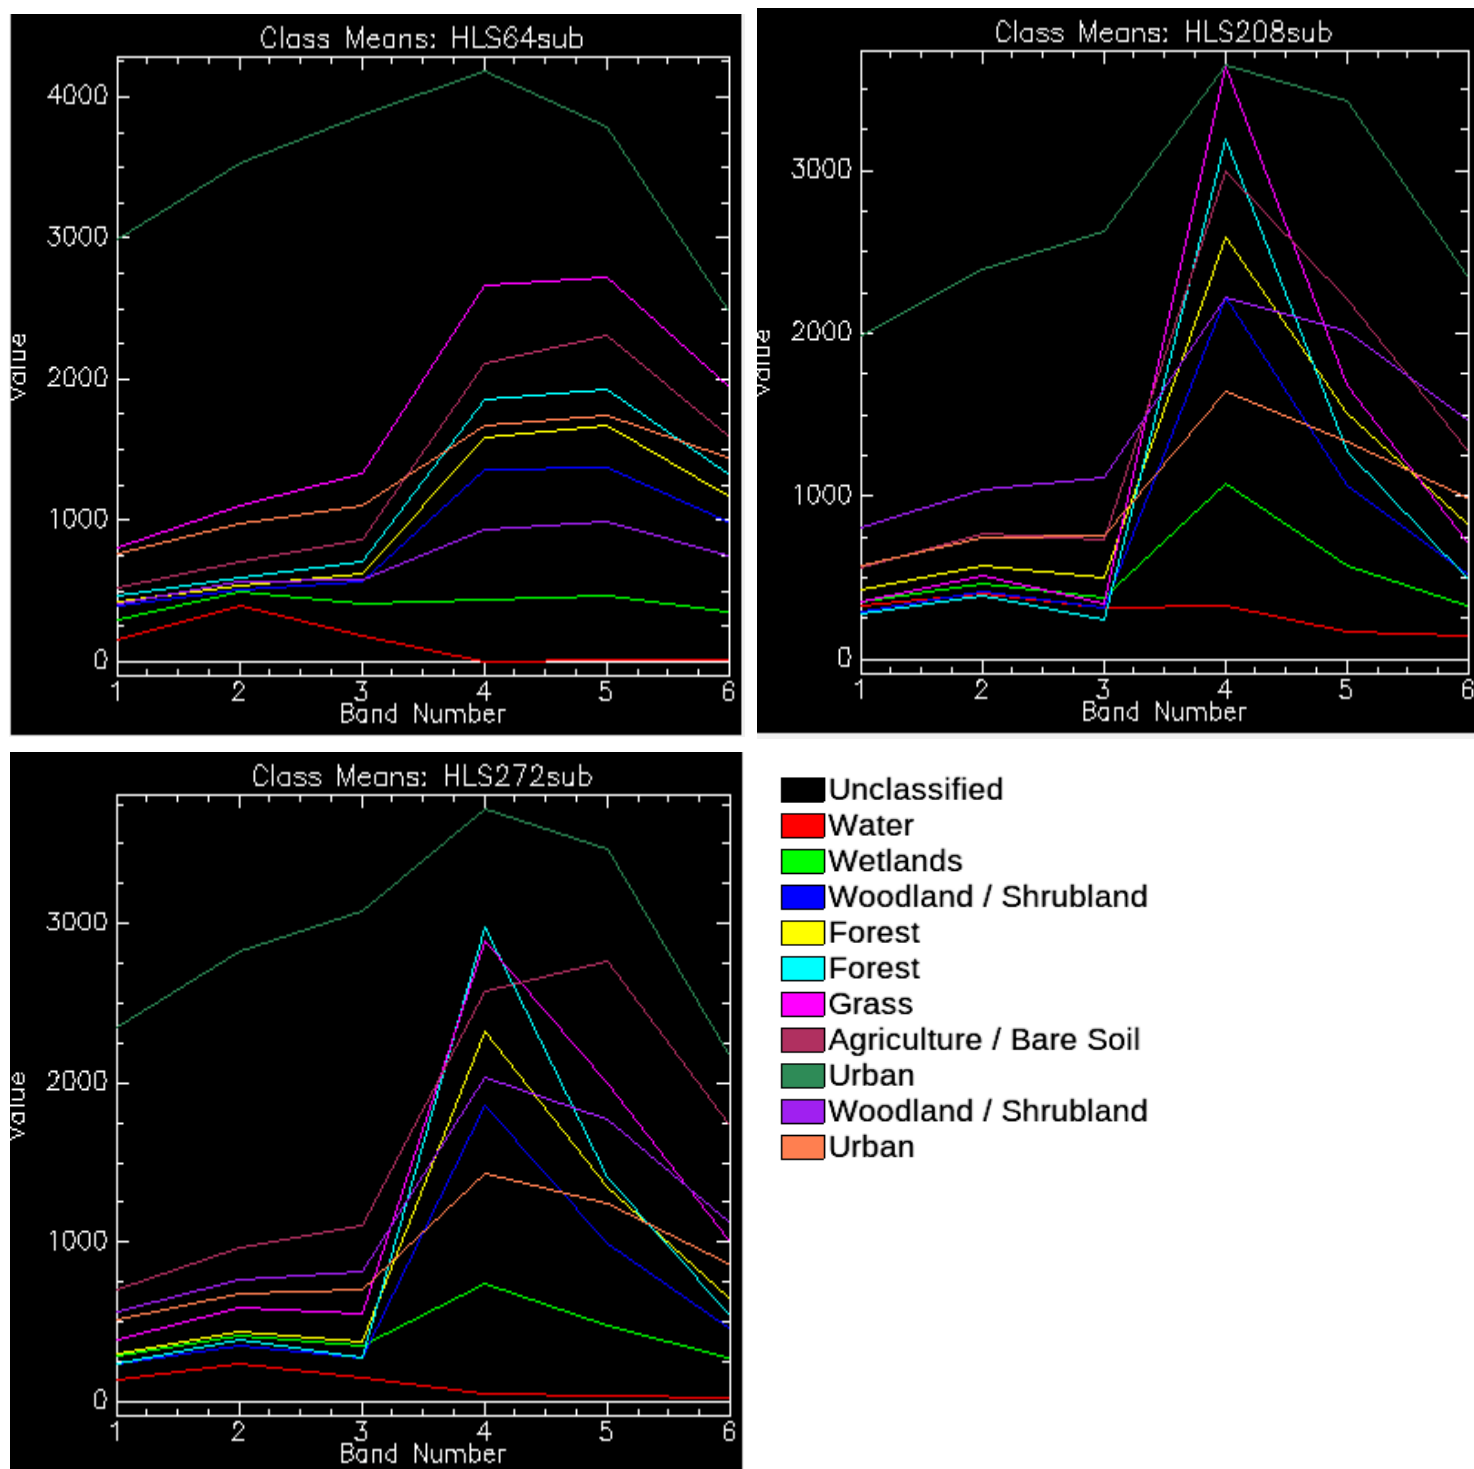

Pixel Percentages of Each Class, July 26, 2019

Pixel Percentages of Each Class, Sept 28, 2019

**Figures 3:** Reflectance of various classes for spring, summer, and fall images.

**Note:** Histograms and legend show classifications before clumping, combining, or changing the color of the classes. There are duplicates of certain classes because I deduced that both dark blue and purple represent woodland / shrubland, yellow and cyan represent forest, and dark green and orange represent urban. Later processing steps combined similar classes, as seen in the final maps (Figures 2.)
